Claim Rejections - 35 USC § 112

Claims 21,23,36,37,72-75, and 77-80 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

The limitations regarding the various steps occurring “substantially at the same time” is not adequately supported by the specification. Similarly, the limitations regarding certain steps commencing proximate the center of a bar and progressing toward the corners is also not properly supported.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 19-23,27 28 and 71 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Wylie et al '323.

'323 discloses encapsulating (column 24, lines 11-17) a tensioned screen in adhesive within tapered slots (column 24, lines 32-37). In an alternative embodiment, as discussed in column 33, lines 13-20, adhesive is applied, then the roller is used to push the screen in the slot and then the adhesive is cured. This clearly indicates that the adhesive is applied before the screen is placed in position by the roller. The claims

requiring that certain steps occur simultaneously at the same time is met as best understood in light of the 112(1) rejection above. Regarding "fabric", screen mesh clearly meets the broad definition of "fabric".

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 24-26,29-38 and 76 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wylie et al '323 as applied above in view of Stemmer et al.

Stemmer discloses the use of ultraviolet curable adhesive as well as the equivalence of this type of bonding with heat sensitive bonding. It would have been obvious to modify the adhesive of '323 whereby ultraviolet curable adhesive is used so as eliminate potential damage to the screen and frame from the application of heat. The specific wavelength and application time of the light would clearly have been an obvious design choice based on the specific materials used, tension in the mesh, etc.
